

CELENA[®] S

DIGITAL IMAGING SYSTEM

Capture brilliance with
the ultimate all-in-one imaging system

Highlights

- All-in-one system for your benchtop
- High quality precision optics
- Advanced LED filter cube technology
- Sensitive scientific-grade CMOS sensor
- 128 GB onboard computer
- Sophisticated image analysis software

The future of imaging is here.

One instrument for imaging and data analysis. One instrument to replace the complex setup of traditional fluorescence microscopes, extensive imaging equipment, computers, and image analysis software. Small, powerful, and easy to use, the CELENA® S Digital Imaging System makes capturing publication-quality fluorescence, brightfield, and phase contrast images a breeze.

User-friendly software accommodates a wide range of imaging applications such as image capture, analysis, live cell imaging, Z-stack imaging, and even automated cell counting.

Exquisite images and powerful data analysis with the CELENA® S

The CELENA® S is an all-in-one digital imaging system for your benchtop, equipped with advanced precision optics, a highly sensitive scientific grade CMOS sensor, digitally controlled LED light sources with hard-coated fluorescence filters, and a computer with image analysis software. Interchangeable objectives, filter cubes, and vessel holders accommodate a wide range of imaging needs. An onstage incubation system gives precise control over temperature, humidity, and gases for live cell monitoring. Remarkably sophisticated yet simple software makes it easy to acquire and analyze multicolor fluorescence, brightfield, Z-stack, and time lapse images as well as monitor cell growth, concentration, and viability.

New! Onstage incubation system

Composed of an environmental chamber, temperature controller, and a gas mixer, the new onstage incubation system supports various live cell imaging applications. Researchers can control the temperature, humidity, and gas content with precision. Live cells can be monitored with the time lapse function or the growth monitor on the CELENA® S.

Key software features

Multicolor fluorescence and brightfield imaging

Capture, overlay, edit, and save multichannel fluorescence images with the simple user interface. Stellar optics and adjustable transmitted light allow for high quality brightfield and phase contrast imaging.

Onboard data analysis

Choose from a variety of measurement and annotation tools to analyze your images immediately upon capture. Export data and annotated images easily via USB.

Live cell monitoring

Monitor live cells with the time lapse function or the growth monitor. Set up the onstage incubator to control the temperature, humidity, and CO₂/O₂ levels for your cells.

Z-stack imaging

Capture multiple images along the Z-axis with the Z-stack function.

Automated cell count and viability analysis

Check cell concentration and viability with the onboard automated cell counter. Count data and images can be stored onboard or exported via USB.

LED fluorescence

CELENA® S LED filter cubes combine LEDs and optical filters for precise control over powerful and uniform illumination. LEDs have an exceptionally long lifetime, do not generate excessive heat, and can be turned on and off instantly without consequence. The hard-coated optical filters provide high transmission efficiencies, making the CELENA® S highly sensitive to even the faintest of fluorescence signals. The interchangeable CELENA® S LED filter cubes allow for diverse and robust fluorescence imaging applications.

Sensitive fluorescence detection – *hard-coated filters and a short light path*

Precise control for consistent illumination – *adjustable intensity, gain, and exposure*

Low maintenance costs – *LED lifetime of 50,000+ hours*

Energy-efficient – *does not generate excessive heat, no warm-up or cool-down time required*

Interchangeable – *12+ LED filter cubes, custom configurations available*

TESTIMONIAL

“The best thing about the CELENA® S is the image quality. We can use it for quick screening or for data collection and in both cases get sharp, detailed images. The multipurpose nature of the CELENA® S software makes it a great addition to our lab. Our researchers learned to get high quality images in a few minutes, which is great compared to the hours of training and practice it takes to learn on a traditional setup.”
